

ANCLORA ENERGYSKAN

User Manual

Practical guide for residential users,
beta professional users and providers

Version 1.3

21 May 2026

ENERGY CLASS

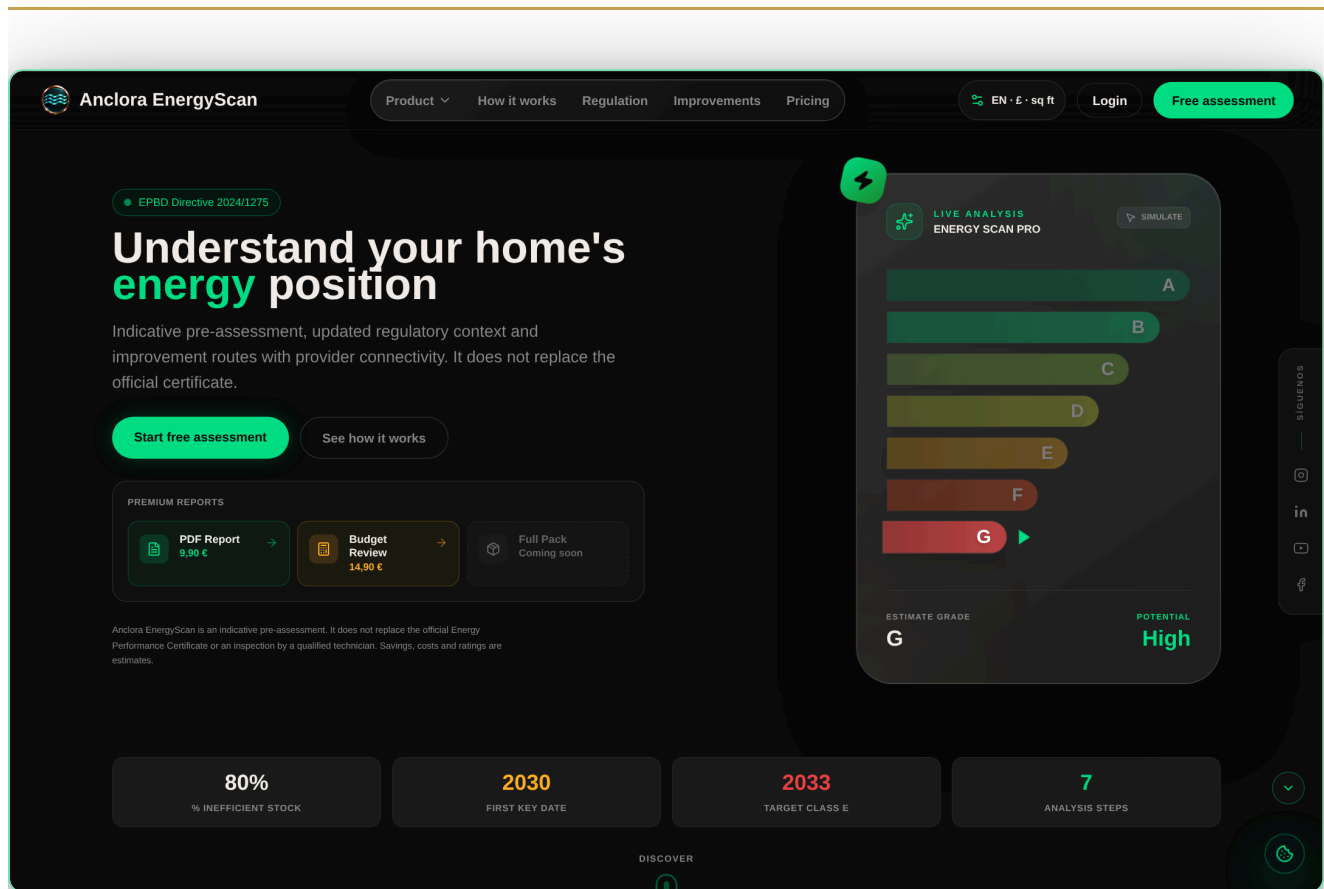

EnergyScan provides an indicative energy pre-assessment. It does not issue official Energy Performance Certificates and does not replace a review by a qualified professional.

Table of contents

An ordered guide to walk through EnergyScan from the first estimate to the professional and provider areas.

01	What is Anclora EnergyScan	3
02	Before you start	6
03	Access, account and preferences	7
04	Residential use step by step	9

06	Premium Report and payments	19
07	Second opinion on a renovation quote	23
08	Beta professional area	25
09	Provider area	29
10	Cookies, privacy and personal data	35
11	Frequently asked questions	37
12	Quick glossary	39
13	Legal notice	40

1. What is Anclora EnergyScan

Home page in dark mode

Anclora EnergyScan is a platform for organising the energy information of a home before making decisions: renovating, comparing quotes, requesting provider contact, or preparing for a technical visit.

The tool generates an **indicative estimate** based on data declared by the user and, when provided, on documents such as photographs, cadastral references, certificates or renovation quotes.

What you can do

Profile	What it allows
Residential user	Create a pre-assessment, view history, download the free PDF, unlock the Premium PDF and analyse renovation quotes
Professional	Manage client files from a professional account. Example: a real estate agency preparing indicative reports for properties in its portfolio
Provider	Receive consented commercial opportunities. Example: an EPC issuer, windows company, solar, insulation, HVAC or renovation contractor

The same organisation can use more than one profile. For example, a technical firm can use the professional area to prepare client files and also register as a provider to receive commercial requests. EnergyScan shows both profiles as independent access points.

Improvements included in this version

This edition of the manual incorporates the most recent connected surfaces of the application:

Area	Improvement visible to the user
Residential dashboard	KPIs, assessment history, Premium status, renovation quotes, provider/professional access and next steps
Free result	Downloadable 2-page basic PDF and a viability block if you have indicated a target energy class
Premium Report	Access to the PDF from the result page or from the dashboard once payment is confirmed
AI visual analysis	In Premium, uploaded photographs can generate a page of indicative visual observations
Budget Review	Quote history with status, detected total and action to open or unlock the full analysis
Beta professional	Access request, review statuses and initial case dashboard
Provider	Operational dashboard with credits, leads, blocked contact, traceable unlocking and commercial tracking

The screens shown have been updated with the connected version of EnergyScan, maintaining the premium dark/light style and the main application navigation where applicable.

What EnergyScan does not do

- It does not issue official Energy Performance Certificates.
- It does not replace recognised software or a visit by a qualified technician.
- It does not guarantee savings, costs, grants, works or commercial outcomes.
- It must not be used as an administrative document.

2. Before you start

Recommended requirements

For a more useful estimate, have the following to hand:

- Property type: flat, detached house, terraced house or other.
- Approximate year of construction.
- Approximate floor area.
- Postcode or address.
- Heating, cooling and hot water systems.
- Condition of windows, façade and roof.
- If available: photographs, cadastral reference, a previous EPC or a renovation quote.

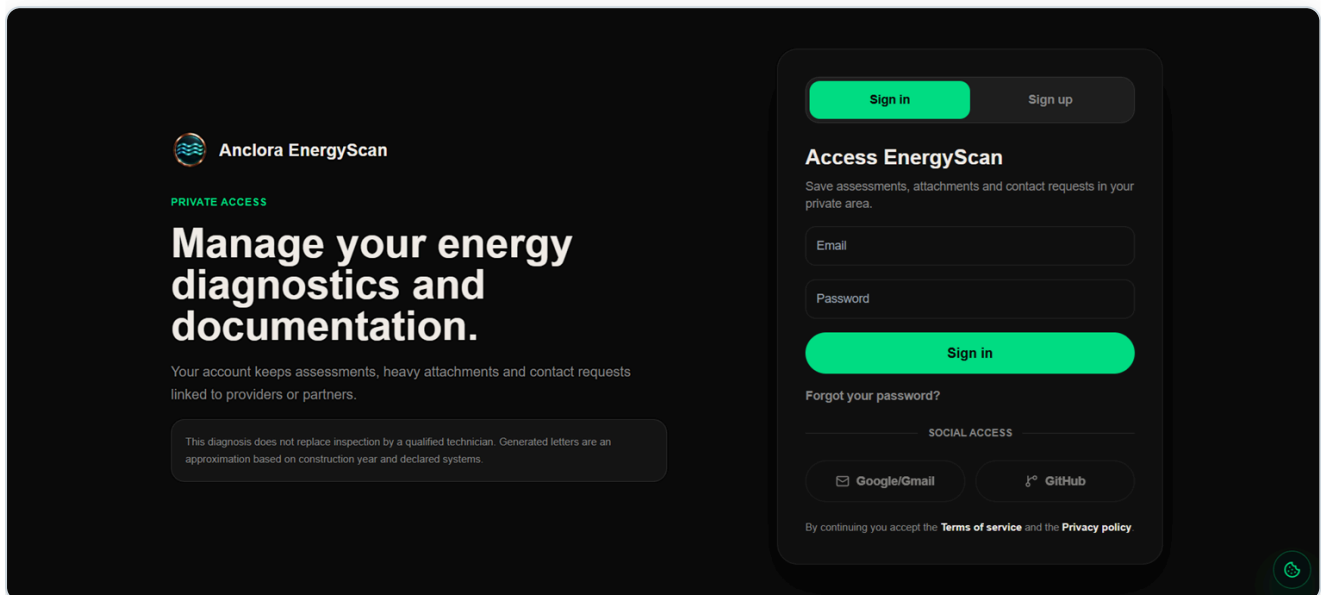

How to interpret the results

Element	Meaning
Estimated class	A-G approximation of the energy situation
Confidence	Reliability level based on data quality and quantity
Penalties	Factors that may worsen the result
Strengths	Favourable data points detected
Scenarios	Possible improvement paths — always indicative

If you intend to sell, rent, apply for grants or register an official rating, you will need an EPC issued by a competent technician.

3. Access, account and preferences

3.1 Create an account or sign in

Access screen

The access screen lets you enter your private area or create a new account. From **Sign in** you can access with:

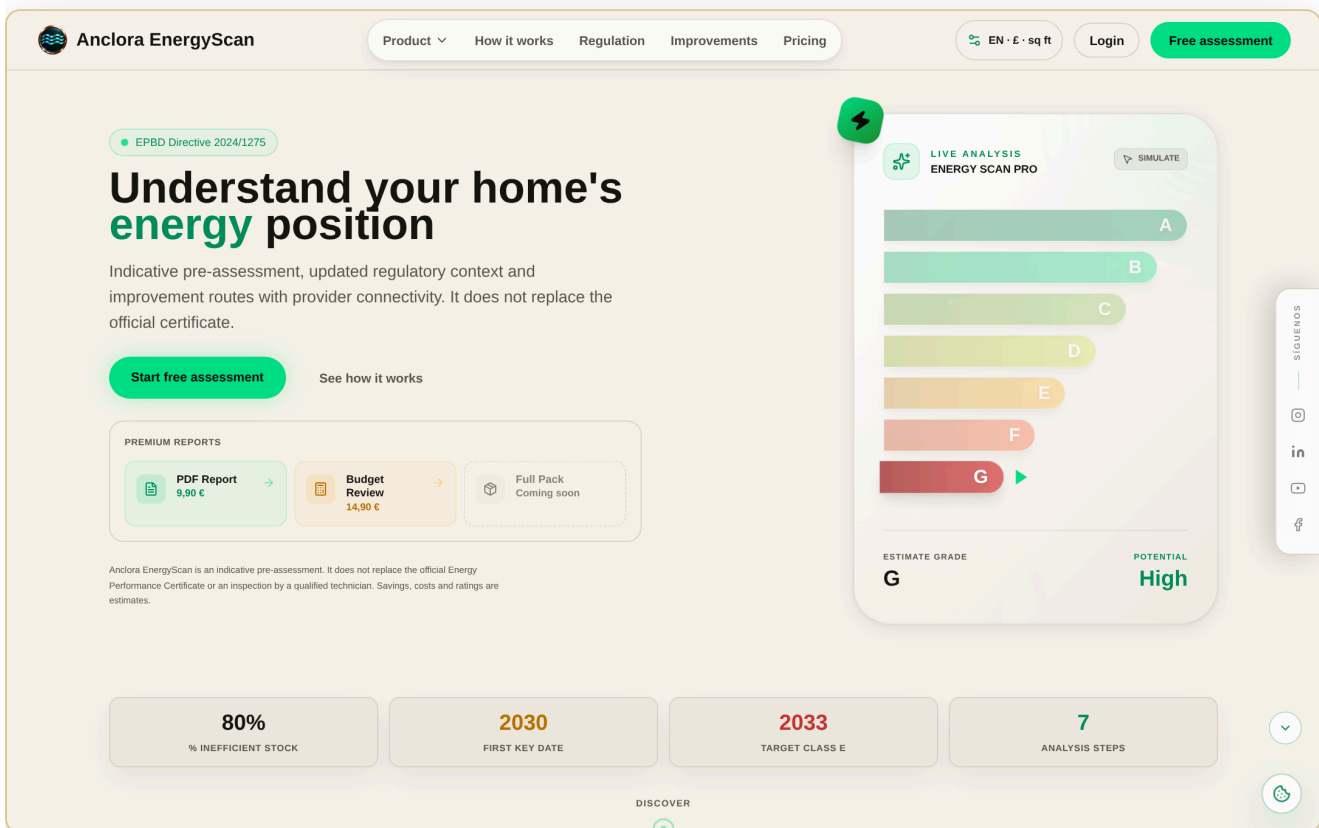

Option	Use
Email and password	Direct access with an account created in EnergyScan
Create account	Register as a new user with name, email and password
Google/Gmail	Social login if configured
GitHub	Social login if configured
Reset password	Request a password reset link

The account lets you save your history, retrieve previous assessments, review analysed renovation quotes and access paid products from the dashboard. The main navigation bar is maintained across all product areas so you can return to pricing, wizard, provider or preferences without losing context.

3.2 Language, theme, currency and units preferences

In the top bar you will find the preferences button, for example **EN · EUR · m²**.

Preference	Options
Language	Spanish, English, German
Theme	Dark or light
Currency	EUR, GBP or other configured currencies
Units	Metric or imperial

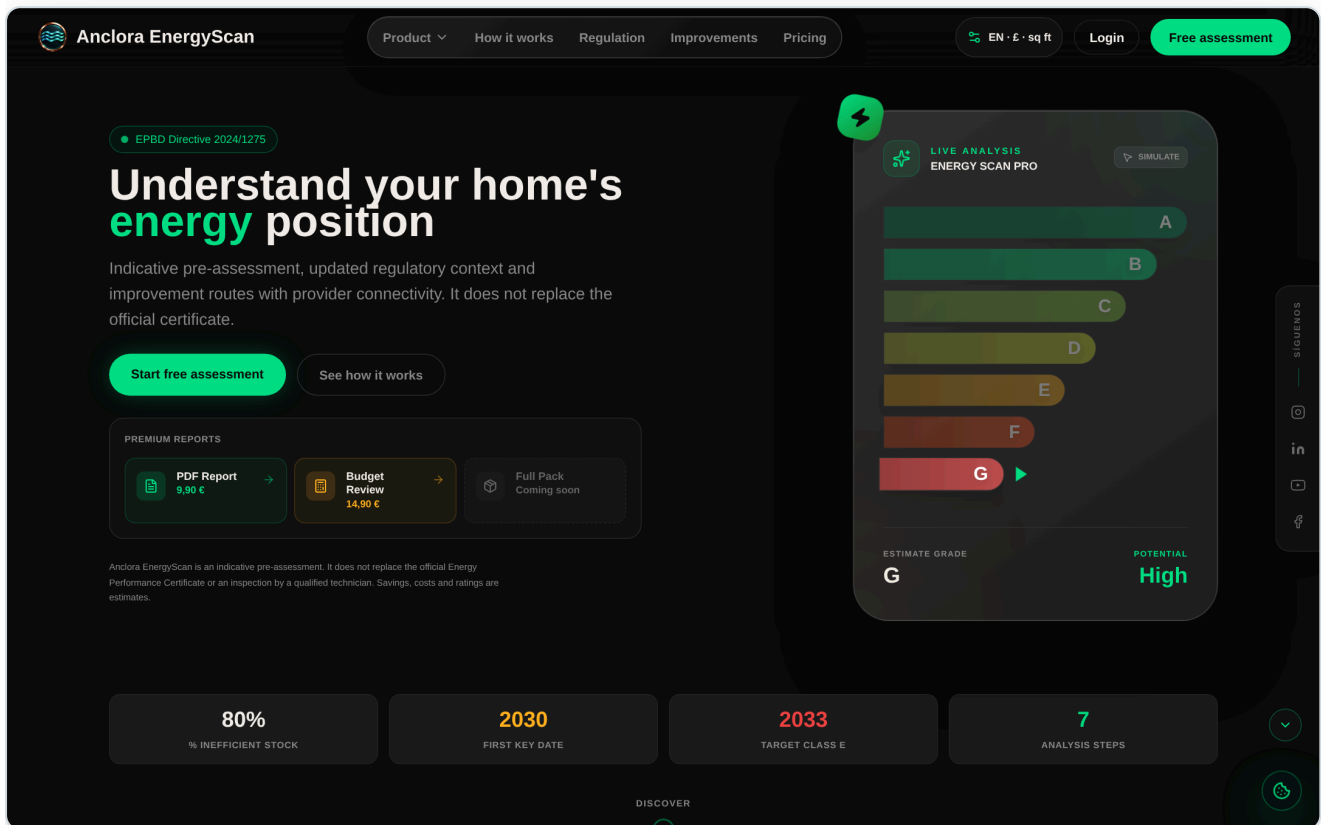

Home page in light mode

New content in the connected product is available in ES/EN/DE. Some data saved by the user, such as file names or original technical values, is shown as originally entered.

4. Residential use step by step

4.1 Home page

Full home page

The home page summarises the main actions:

1. **Start assessment:** opens the pre-assessment wizard.
2. **Product:** expands access to the calculator, reports, renovation quotes, residential users, professional and providers.
3. **How it works · Regulation · Improvements · Pricing:** direct links to the landing sections (in that order).
4. **Preferences:** changes language, theme, currency and units.
5. **Social rail:** social media icons fixed on the right side (hidden on mobile, visible at the bottom of the page).
6. **Discover:** button in the hero that smoothly scrolls to the first content section.

4.2 Energy savings calculator

The screenshot shows the 'Public energy savings calculator' interface on the Anclora EnergyScan website. The header includes the Anclora EnergyScan logo, navigation links for Product, Regulation, and Pricing, and user options for EN · £ · sq ft, Login, and a Free assessment button. The main heading is 'Public energy savings calculator', followed by a disclaimer: 'Indicative tool to estimate savings, cost and payback ranges. It does not guarantee savings or replace an official EPC or technical review.' The calculator form contains several input fields: 'Flat / apartment' (dropdown), 'Area m2' (text input), 'A' (dropdown), 'Windows' (dropdown), and 'Approximate monthly energy spend' (text input with a help icon). There is an 'Advanced options' link and a large green 'Calculate indicative range' button. A small chat icon is visible in the bottom right corner.

Energy savings calculator

The public calculator estimates an indicative economic range for one specific measure. It uses the monthly bill amount as the basis for estimating annual savings, approximate investment and simple payback. It does not replace the full pre-assessment or a professional quote.

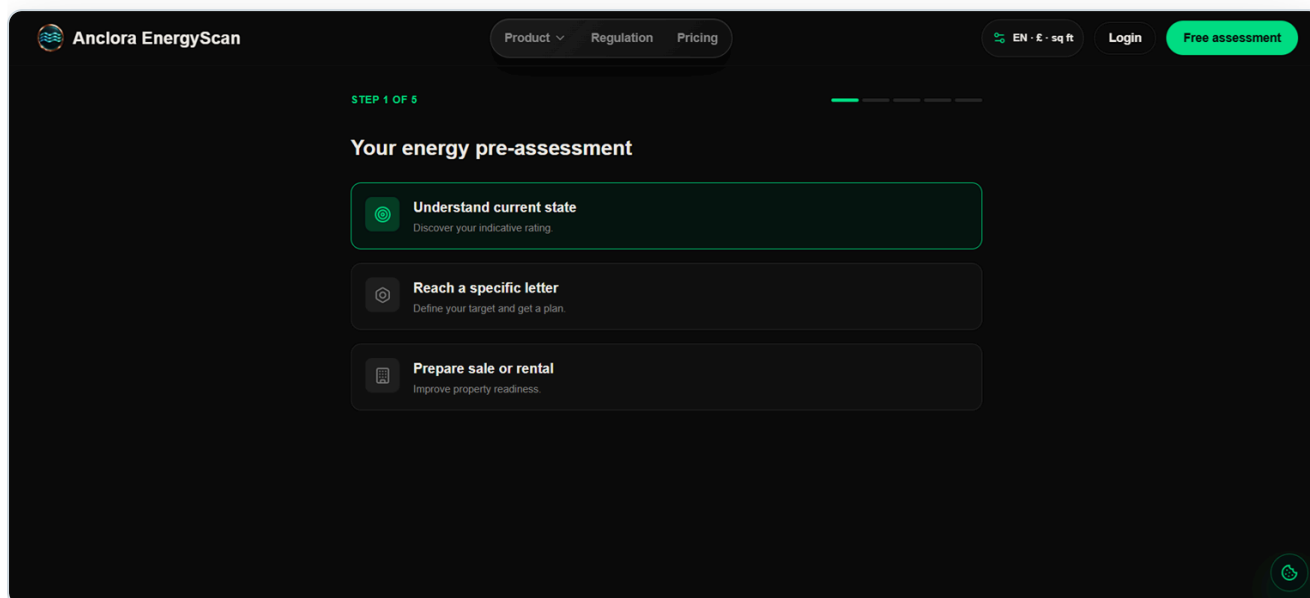

Steps:

1. Select the property type.
2. Enter the floor area.
3. Enter the average monthly amount of your energy bills. Do not enter kWh or contracted power.
4. Select the specific improvement you want to simulate.
5. Click **Calculate indicative range**.

Result	How to read it
Estimated annual savings	Possible range compared with the declared energy spend
Indicative investment	Approximate cost of applying the selected measure
Simple economic payback	Approximate years to recover the investment through energy savings only

A long payback does not mean the measure is useless: it may make sense for comfort, maintenance, regulation, sale/rental preparation or property value.

4.3 Pre-assessment wizard

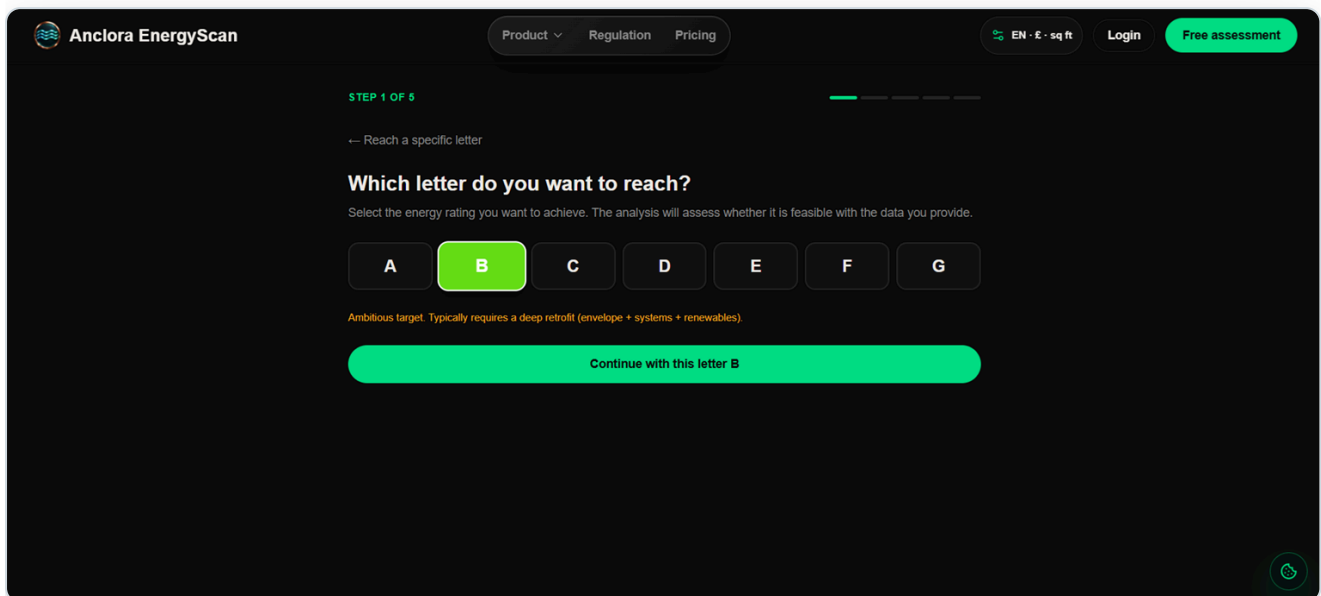

Pre-assessment wizard

The wizard is the main flow for creating a new assessment. It consists of 5 guided steps that can be completed in a few minutes.

Step	What to provide
Objective	Know current status, renovate, sell/rent or another goal
Property data	Type, year, floor area and postcode
Orientation and roof	Data that influences thermal demand
Systems	Heating, cooling, hot water, ventilation and renewables
Building envelope	Windows, façade insulation and roof insulation
Timeline and budget	Planned timeframe and financial range
Documentation	Photographs, EPC or renovation quote to enrich the assessment

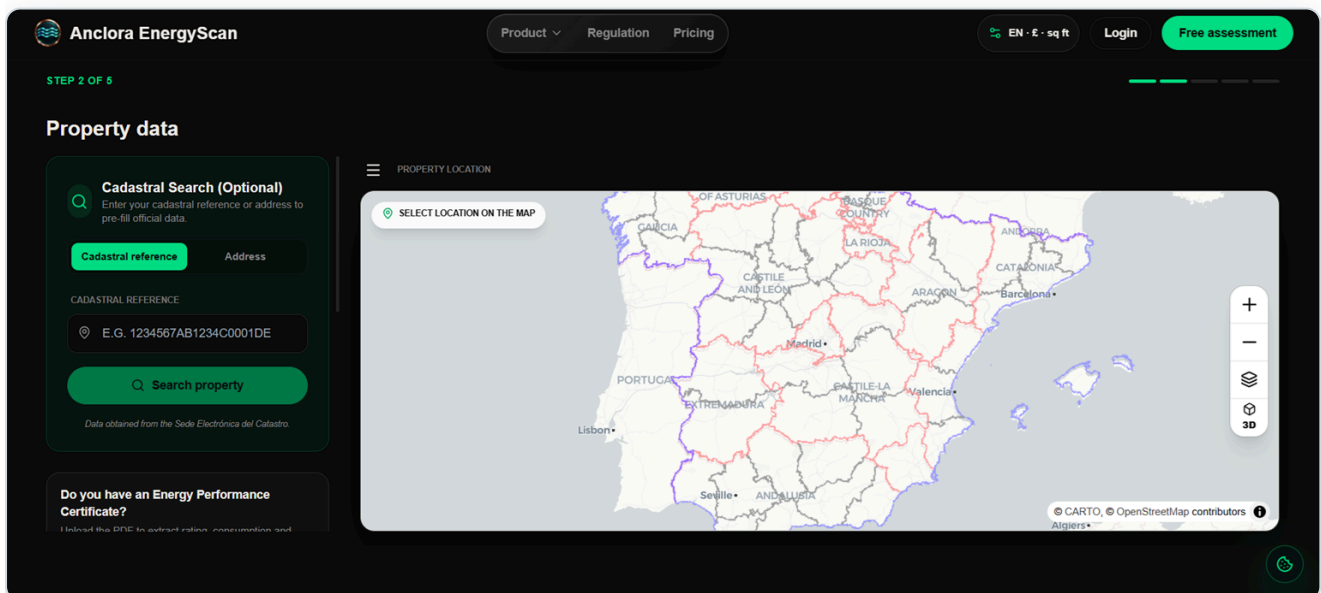

4.3.1 Target energy class selection

Target energy class selection

If you choose **Reach a specific class**, the wizard displays an A-G class selector. You can indicate which class you want to achieve and the assessment will consider whether it is feasible given the data you enter. EnergyScan will show a notice if the target is very ambitious or if you already meet it with your current situation.

4.4 Cadastral search and property map

Property data with cadastral search and map

In the property data step you can use the **Cadastral Search** to locate the property by cadastral reference or address. The map updates automatically and allows you to select the exact location. Data obtained from the Cadastre (floor area, year of construction, type) is pre-

filled in the form to speed up the process. You can also submit documents or images in this step.

Good practices:

- Review the imported data before continuing.
- Do not upload documents unrelated to the property.
- Avoid including unnecessary personal data in photographs or renovation quotes.
- If you import an EPC and the current class already meets or exceeds your target, the wizard will show an amber notice to review the goal and suggest a more ambitious class.
- The photograph progress bar only appears when there are images in the upload queue. If you upload documents only — such as an EPC or renovation quote — this bar is not shown.

4.5 Free result

After completing the wizard you will see the preliminary result:

- Estimated energy class.
- Confidence level.
- Climate zone.
- Captured data.
- Penalties, strengths and missing data.
- Preview of Premium content.
- Free basic PDF download if the assessment is not a demo.
- Amber banner if you have uploaded photographs and have not yet unlocked Premium.

 **Tu objetivo (letra C) es alcanzable, pero el coste supera tu presupuesto declarado**
Inversión mínima para alcanzar la letra C: 158.022 € frente a tu presupuesto de 10.000 €. El informe Premium explica las opciones.

Target class viability

If you selected **I want to reach a specific class**, EnergyScan shows a viability block before the paywall. It may indicate:

Scenario	What it means
Target achievable within budget	The minimum estimated cost falls within the declared budget
Target achievable but above budget	The improvement is possible, but the indicative investment exceeds the stated budget
Target not achievable	Even a full renovation estimate would not reach the target class

The amounts are indicative and do not replace a real technical quote.

**Tus imágenes se conservan como evidencias**
El análisis visual IA de tus fotografías está incluido en el informe Premium. Desbloquéalo para recibir observaciones orientativas sobre la envolvente, carpinterías, calefacción y más.

Photographs saved as evidence banner

If you have uploaded photographs, they are kept as evidence. The AI visual analysis of those images is reserved for the Premium report.

INFORME GRATUITO
Descarga tu prediagnóstico gratuito
Un PDF de 2 páginas con tu calificación orientativa, principales debilidades y fortalezas.

Descargar PDF gratuito

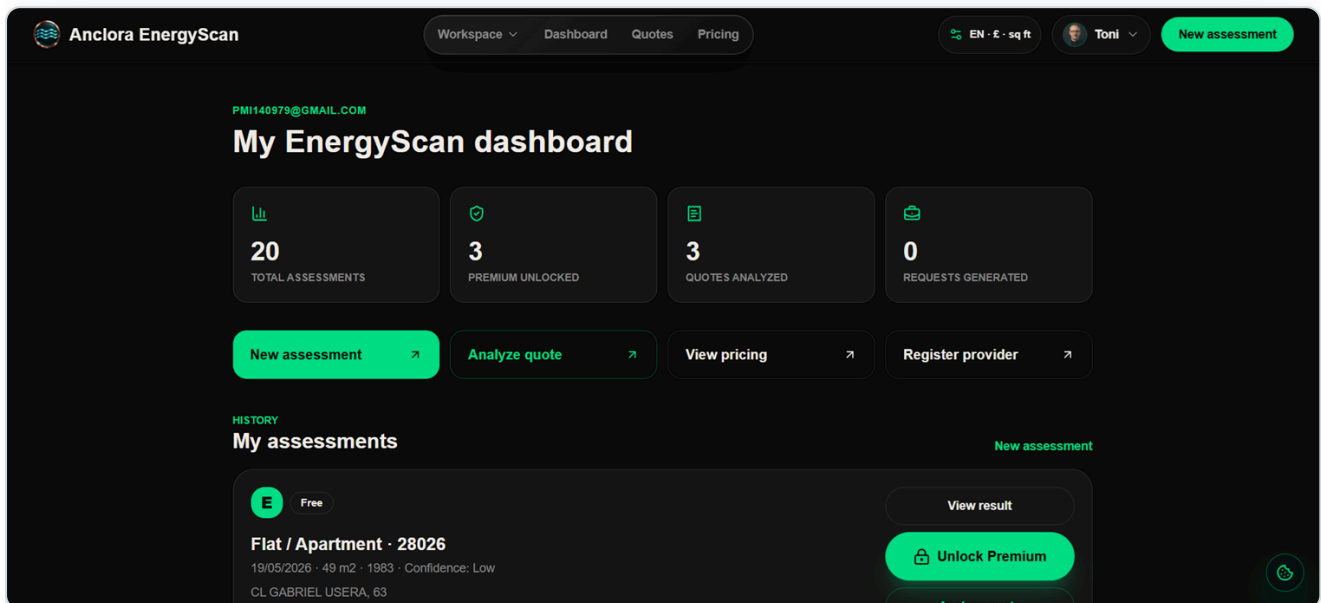

Free PDF download

The free PDF includes 2 pages with the estimated class, climate zone, confidence level and main weaknesses and strengths. It does not include full scenarios, costs, grants, AI visual analysis or a premium annex.

From the result page you can:

Action	When to use it
View result	Review the basic assessment
Download free PDF	Save a 2-page basic summary at no cost
Unlock Premium	Get full scenarios and the full PDF
Analyse quote	Move on to the second opinion on a renovation quote
Request a provider	Share data with selected providers when consent exists
Back to dashboard	Retrieve history and actions

5. My EnergyScan dashboard

Connected dashboard on desktop

The dashboard is the work centre for signed-in users. Access it from `/dashboard` or from the application links.

5.1 Top KPIs

KPI	What it shows
Total assessments	Number of saved pre-assessments
Premium unlocked	Assessments with Premium PDF available
Quotes analysed	Budget Reviews linked to your account
Requests generated	Leads or requests linked to your assessments

5.2 Quick actions

Button	Action
New assessment	Opens the wizard
Analyse quote	Opens the second opinion on a renovation quote
View pricing	Shows products and pricing
Provider dashboard / Register as provider	Enter or create a provider account

5.3 Assessment cards

Each card shows:

- Estimated class.
- Status: **Free**, **Premium**, **Demo** or **Payment pending**.
- Property type, postcode, floor area and year.
- Assessment confidence level.
- **View result** button.
- **Download PDF** button if paid.
- **Unlock Premium** button if not yet paid.
- Quick access to **Analyse quote**.

5.4 Renovation quote cards

Each renovation quote shows:

- File name.
- Date.
- Status: draft, paid or pending.
- Detected total.
- Extraction confidence.
- Action to view the analysis or unlock the full report.

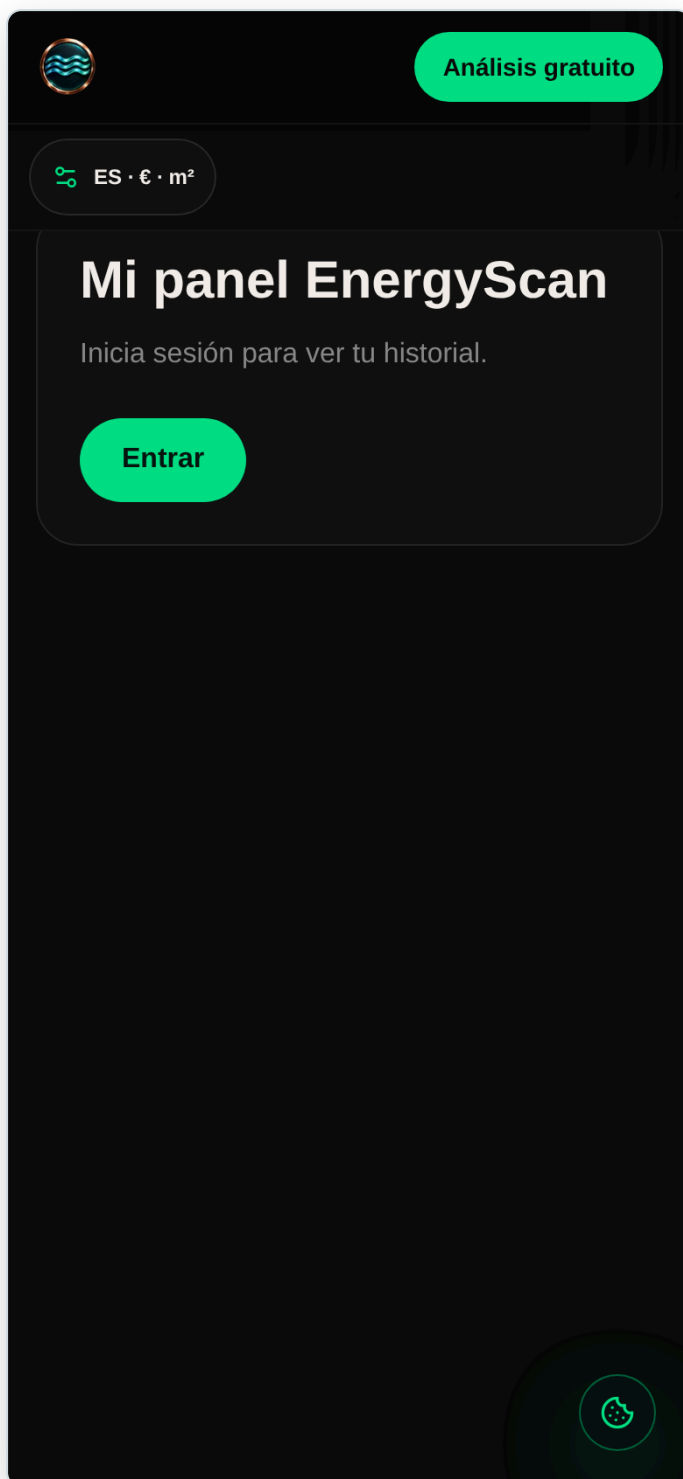

5.5 Connected areas

The dashboard also shows **connected profiles**. They are not mutually exclusive:

Profile	Who it is for	What it manages
Provider	Companies that want to receive requests for energy works, installation or services	Leads, credits, consented contact unlocking and commercial tracking
Professional	Technicians, advisers, real estate agencies or teams that prepare client cases	Files, assessments linked to clients, paid or demo PDFs and beta professional access

A real estate agency using EnergyScan to prepare reports for client properties fits the **professional** profile. An EPC issuer, solar panel company, windows firm, HVAC or insulation company seeking commercial requests fits the **provider** profile. If the same company needs both, it can activate both access points.

5.6 Mobile view

Connected dashboard on mobile

On mobile, the dashboard prioritises quick reading: it shows identity, KPIs and main actions first; the history then scrolls down as cards. There are no compressed tables or horizontal scrolling, and the menu retains direct access to preferences and starting an assessment.

6. Premium Report and payments

Anclora EnergyScan

EN · £ · sq ft Login Free assessment

PRICING

Clarity before investing

A simple model: free basic result and one-time paid Premium report.

Free	Individual Premium	Advanced Buy / Sell
Available	Launch price - €14.90	Coming soon
€0	€9.90	Coming soon · €24.90
- Basic diagnosis - Estimated rating - Confidence level - Main penalties - Scenario preview - Basic downloadable PDF	- Full downloadable PDF - Complete improvement scenarios - Indicative costs by item - Personalized regulatory guide - Applicable grants - Evidence & data source matrix - Checklist for technician and contractor - Document annex	- Everything in Premium - Indicative Condition & Risk by element - Basic property accessibility - Negotiation questions - Action / Inaction risks - For buyers, sellers and agencies
Start free assessment →	Start Premium · €9.90 →	Coming soon

Anclora EnergyScan is an indicative pre-assessment. It does not replace the official Energy Performance Certificate or an inspection by a qualified technician. Savings, costs and ratings are estimates.

Pricing page

The **Premium PDF Report** is a one-time paid product for a specific assessment.

6.1 What it includes

Section	Content
Full assessment	Class, confidence, context and main factors
Improvement scenarios	Recommendations grouped by priority
Indicative costs	Ranges by item or measure
Regulatory context	EPBD context and indicative risks
Grants / subsidies	Informative references — not a guarantee of approval
Document annex	Submitted data and available traceability
Cadastral images	Highlighted plot diagram and cartographic map of the surroundings when cadastral data is available
AI visual analysis	Final page with observations on up to 3 submitted photographs, if available

6.2 Free vs Premium comparison

Feature	Free	Premium
Indicative result on screen	Yes	Yes
Estimated class and confidence	Yes	Yes
Downloadable PDF	Basic 2-page PDF	Full professional PDF
Improvement scenarios	Preview	Full detail
Indicative costs	No	Yes
Grants and extended regulatory context	No	Yes
AI visual analysis of photographs	No	Up to 3 photographs prioritised by energy relevance
Cadastral images in PDF	No	Highlighted plot and surroundings map if data is available

6.3 Free PDF

The free PDF is available from the result page at no cost, as long as the assessment is not a demo. It is useful for saving a basic summary or sharing an initial reading.

It includes:

- Estimated energy class.
- Climate zone.
- Confidence level.
- Main weaknesses detected.
- Main strengths.
- Premium invitation block.

It does not include full scenarios, indicative costs, grants, AI visual analysis, document annex or cadastral images.

6.4 AI visual analysis of photographs

If you unlock Premium and have uploaded photographs, EnergyScan can automatically analyse up to 3 images, prioritising façades and window frames for energy relevance.

Plan	Images analysed
Free	0. Photographs are kept as evidence
Premium	Up to 3
Pro / B2B	Ready for up to 8 — not active for end users in this version

The analysis appears in the Premium PDF as an **AI visual analysis of submitted images** page. It groups findings by category, proposes verifications for a technician and shows limitations. The language is measured: it uses expressions such as "it appears", "this could correspond to" or "seems to feature", never conclusive statements.

AI visual analysis does not constitute an energy certificate, does not replace a site visit or technical inspection, and may be limited by the quality, framing or content of the photographs.

6.5 How to unlock it

1. Complete an assessment.
2. On the result page or in the dashboard, click **Unlock Premium**.
3. Review the Stripe checkout.

4. Complete payment by card in secure mode.
5. Return to the result page or dashboard.
6. Click **Download PDF**.

6.6 Payment statuses

Status	Meaning
Free	The assessment exists but Premium has not been unlocked
Payment pending	Checkout was started but confirmation is still pending
Premium	Payment is confirmed and the PDF is available
Demo	Authorised sample mode

If you have just paid and the status still shows as pending, wait a few seconds and reload the page. Confirmation depends on the Stripe webhook.

7. Second opinion on a renovation quote

The screenshot shows the 'Renovation quote second opinion' page on the Anclora EnergyScan website. The page has a dark theme. At the top, there is a navigation bar with the Anclora EnergyScan logo, a dropdown menu for 'Product', 'Regulation', and 'Pricing', a language selector for 'EN · £ · sq ft', a 'Login' button, and a green 'Free assessment' button. The main heading is 'Renovation quote second opinion', followed by a subtext: 'Paste the content of a quote to detect line items, amounts and general alerts. The full result is independent from the Premium report.' Below this is a large text input area with the placeholder 'Paste your renovation quote text here...'. At the bottom of the input area are two buttons: 'Analyze quote' (green) and 'Import quote PDF' (blue). The footer contains the Anclora EnergyScan logo and tagline, a 'Product' section with links to 'How it works', 'Regulation', 'Calculator', 'Quotes', 'Providers', and 'Professional', a 'Legal' section with links to 'Terms of service', 'Privacy policy', and 'Legal notice', and a 'Contact' section with the email 'hola@anclora.com'. A small circular icon is visible in the bottom right corner of the footer area.

Second opinion on a renovation quote

The second opinion analyses a renovation quote to detect line items, amounts and possible alerts.

7.1 When to use it

Use it before accepting a quote for:

- Windows.
- Insulation.
- Heat pump or HVAC systems.
- Photovoltaic installation.
- Full energy renovation.

7.2 Accepted formats

Format	Example
Pasted text	Copied from email, Word or PDF
Text-based PDF	Quote exported from a word processor
Tables	Excel/LibreOffice exported to PDF
Lists	Quotes with bullet points or chapters
Works codes	Presto/Arquimedes-style formats if the text is readable

7.3 Free result

The free result shows:

- Number of line items detected.
- Detected total.
- Analysis confidence.
- General alerts.

7.4 Full report

The full report is independent of the residential Premium and has its own payment.

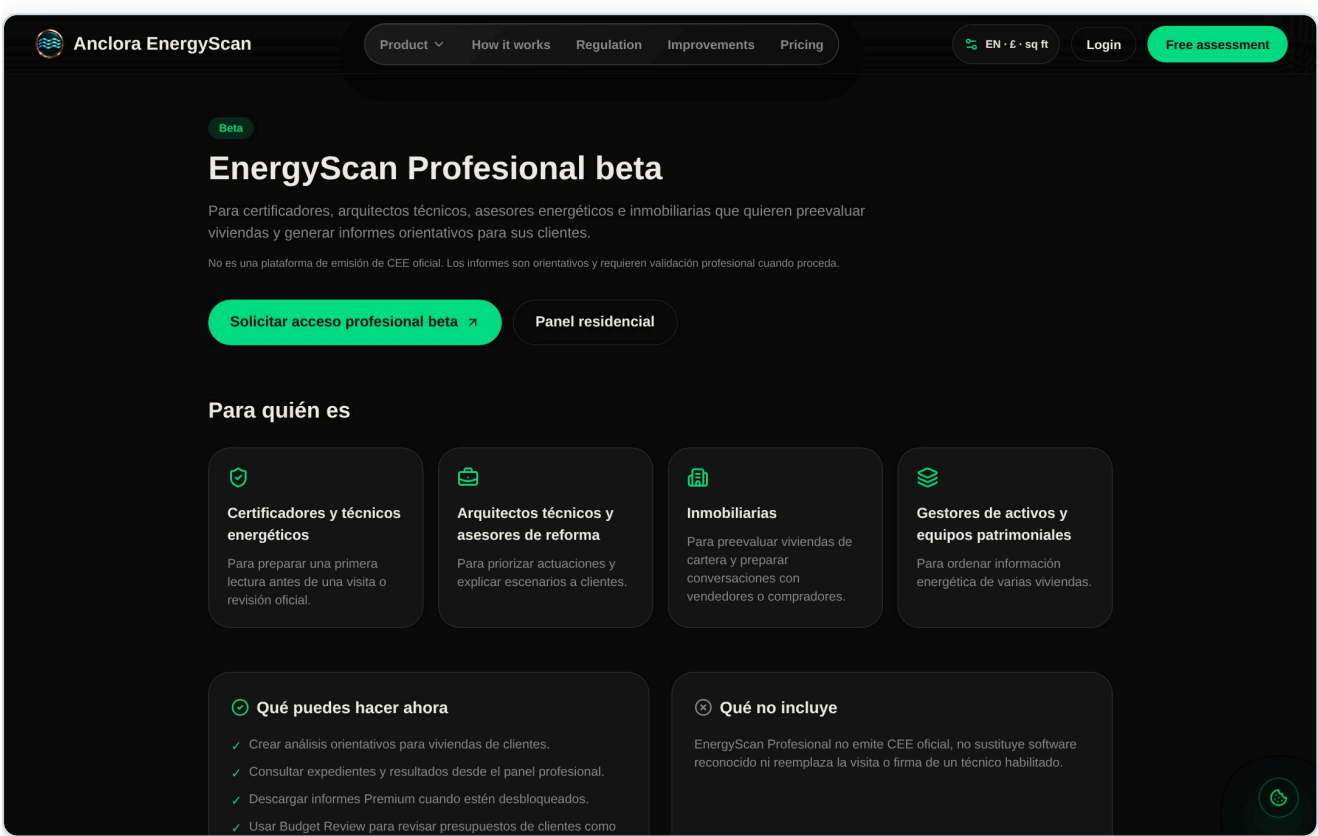

It includes:

- Line item review.
- Possible out-of-range prices.
- High quote alerts.
- Indicative observations.

It does not replace a review by a qualified technician, architect, quantity surveyor, legal adviser or contractor following an on-site measurement.

8. Beta professional area

8.1 Professional page

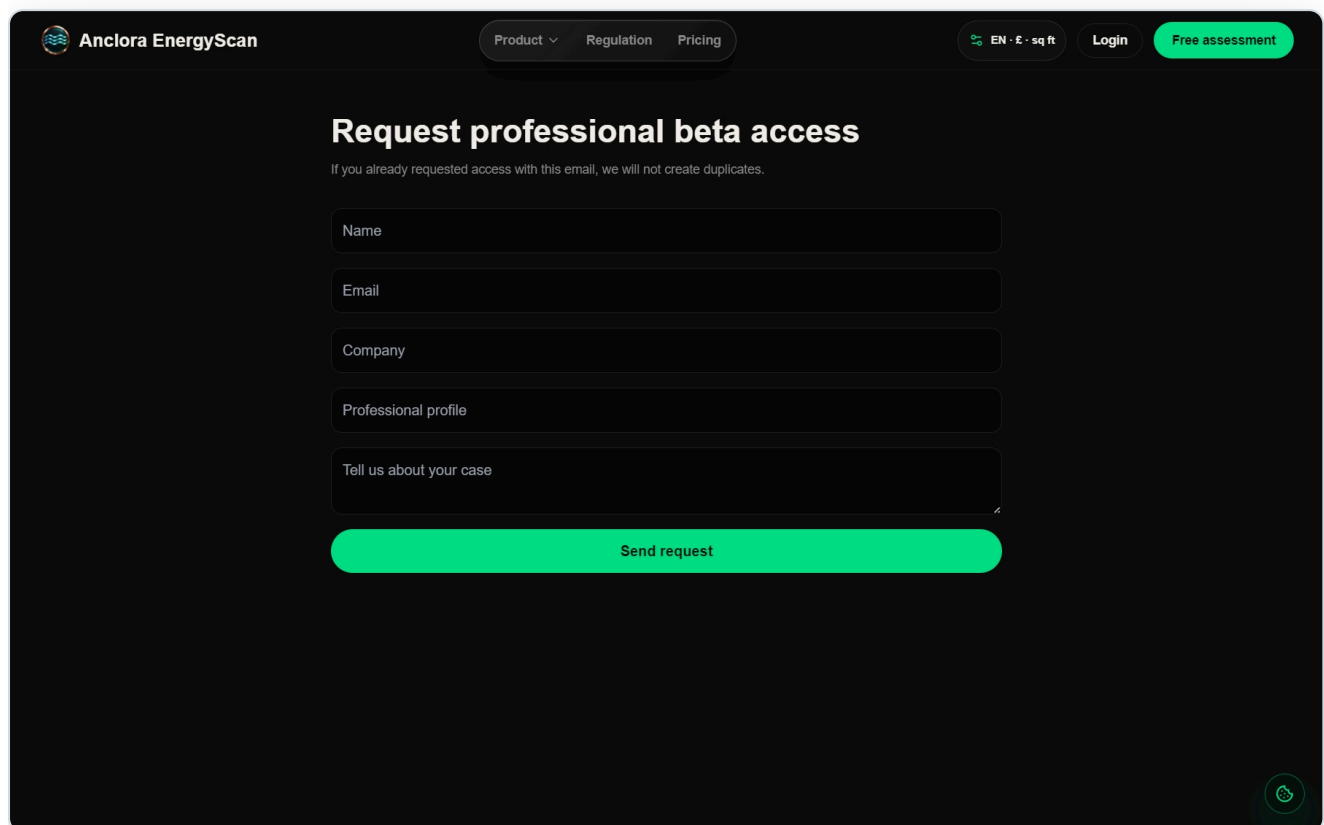

Professional page

The professional area is designed for EPC issuers, technical architects, energy advisers and real estate agencies that want to pre-evaluate properties before an official review.

Planned features:

Feature	Status
Multi-file	Available in MVP with assessments linked to the user
History	Available from the dashboard
Branded PDF	Coming soon
Advanced client management	Coming soon
Monthly plans	Coming soon

8.2 Requesting beta access

The screenshot shows a web interface for requesting professional beta access. At the top, there is a navigation bar with the Anclora EnergyScan logo, a menu with 'Product', 'Regulation', and 'Pricing', and user options for 'EN · £ · sq ft', 'Login', and a 'Free assessment' button. The main heading is 'Request professional beta access', followed by a note: 'If you already requested access with this email, we will not create duplicates.' The form consists of five input fields: 'Name', 'Email', 'Company', 'Professional profile', and 'Tell us about your case'. A large orange 'Send request' button is positioned below the fields. A small circular icon with a question mark is located in the bottom right corner of the form area.

Professional access request form

Steps:

1. Go to **Professional**.
2. Click **Register as professional**.
3. Provide name, email, company, profile and use case.
4. Submit the request.

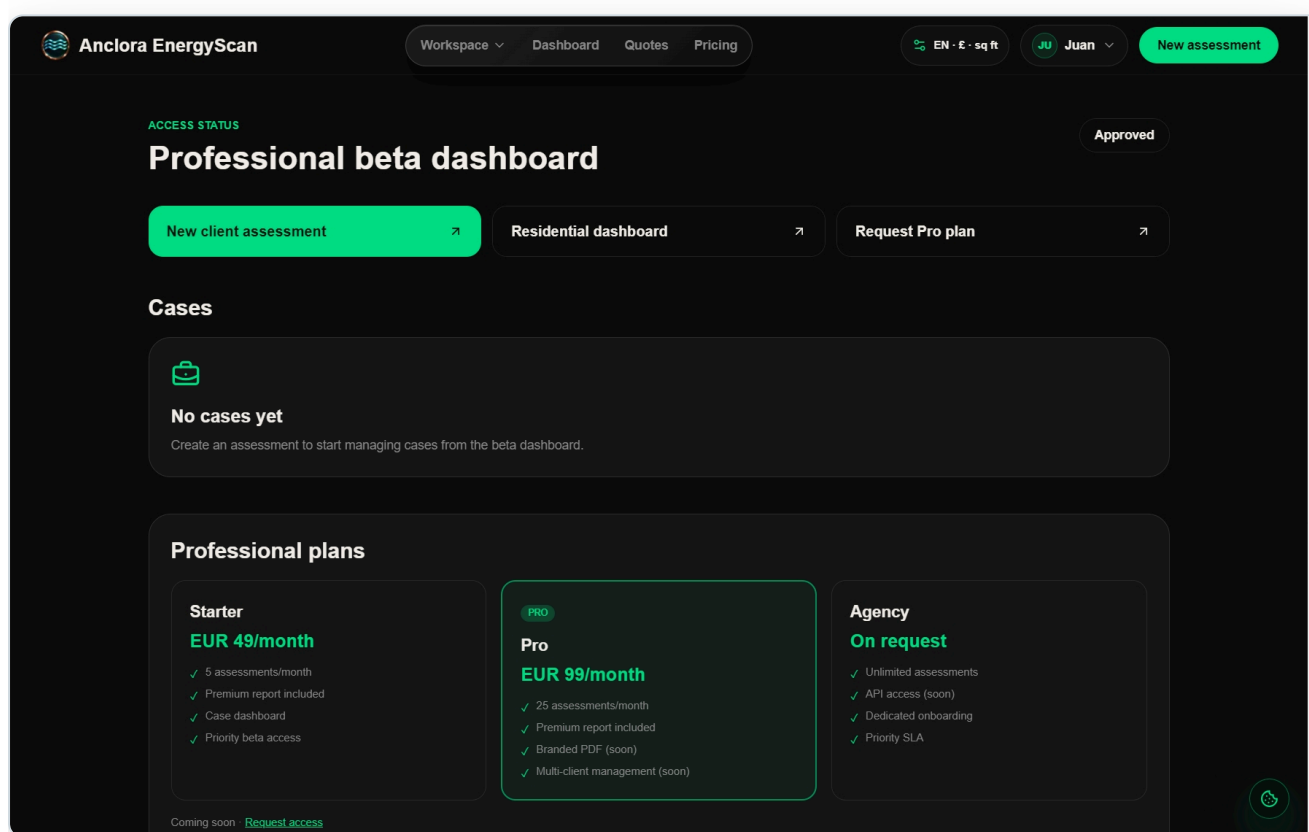

If a request for the same email already exists, EnergyScan does not create duplicates and will show the existing status.

8.3 Access statuses

Status	What it means
No request submitted	You have not yet requested beta access
Under review	The request is being reviewed
Approved	You can enter the professional dashboard
Declined	The request has not been approved at this time

When your request is approved, you will receive a confirmation email. To access the professional dashboard, sign in — or create a new account — on EnergyScan using the same email address you submitted in the request form.

8.4 Professional dashboard

Beta professional dashboard

When access is approved, the dashboard shows:

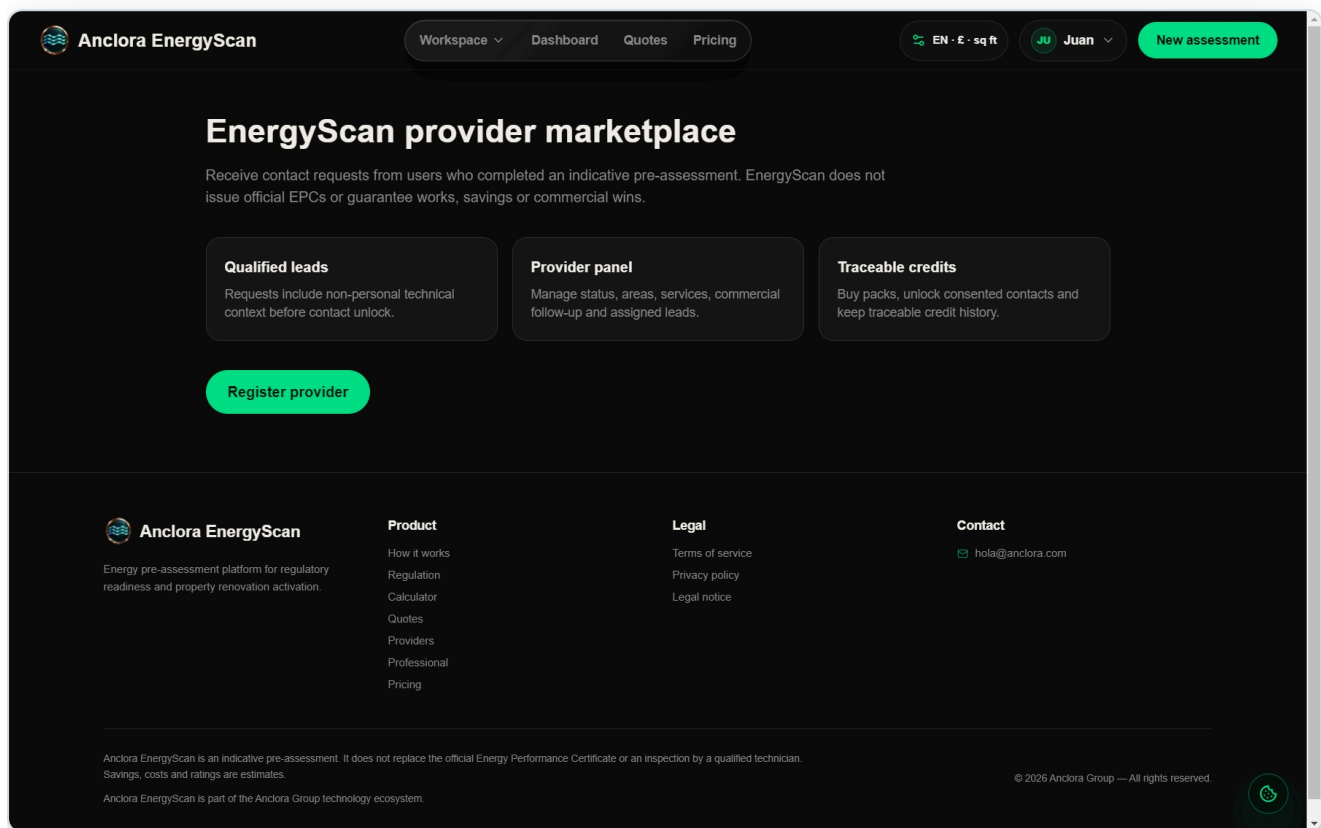

- Access status.
- Quick actions: new client assessment, residential dashboard, request Pro plan.
- Files linked to the user.
- Premium status of each file.

- Access to the result or PDF if available.
- Block of upcoming beta features.

In the MVP, files correspond to assessments saved by the professional user. Advanced client/alias management and branding are prepared for future phases.

9. Provider area

9.1 Provider marketplace

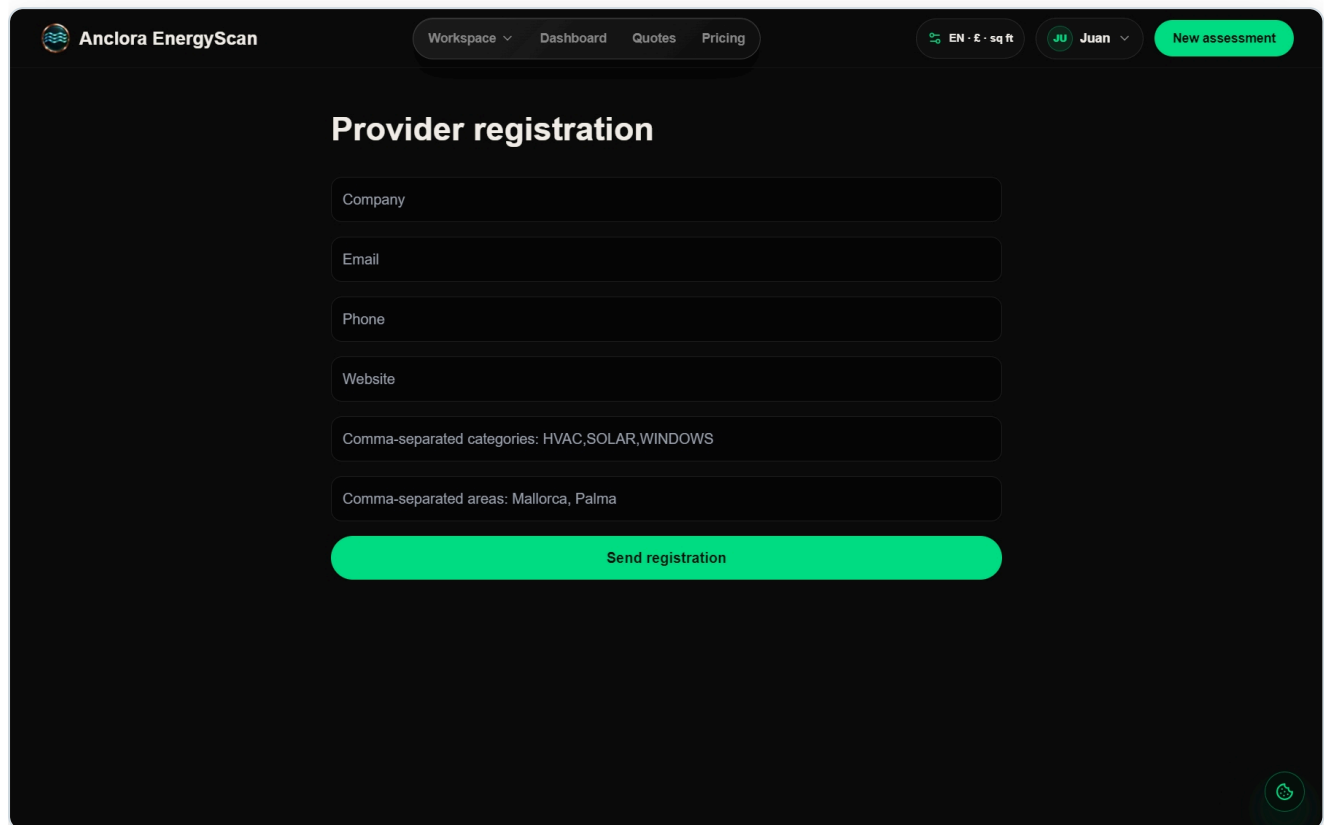

Provider marketplace

The marketplace connects providers with users who have completed a pre-assessment and have requested contact.

Typical profiles:

- HVAC installers.
- Windows companies.
- Insulation companies.
- Photovoltaic installers.
- EPC issuers and technicians.
- Renovation contractors.

9.2 Provider registration

The screenshot shows the 'Provider registration' form in the Anclora EnergyScan interface. The form is set against a dark background with light-colored text and input fields. At the top, the header includes the Anclora EnergyScan logo, navigation links (Workspace, Dashboard, Quotes, Pricing), and user information (EN - £ - sq ft, Ju Juan, and a New assessment button). The form itself is titled 'Provider registration' and contains several input fields: Company, Email, Phone, Website, Comma-separated categories (with the example 'HVAC,SOLAR,WINDOWS'), and Comma-separated areas (with the example 'Mallorca, Palma'). A large green 'Send registration' button is at the bottom of the form. A small circular icon with a plus sign is visible in the bottom right corner of the form area.

Provider registration

To register:

1. Go to **Providers**.
2. Click **Register as provider**.
3. Complete company name, email, phone, website, categories and service areas.
4. Submit the form.

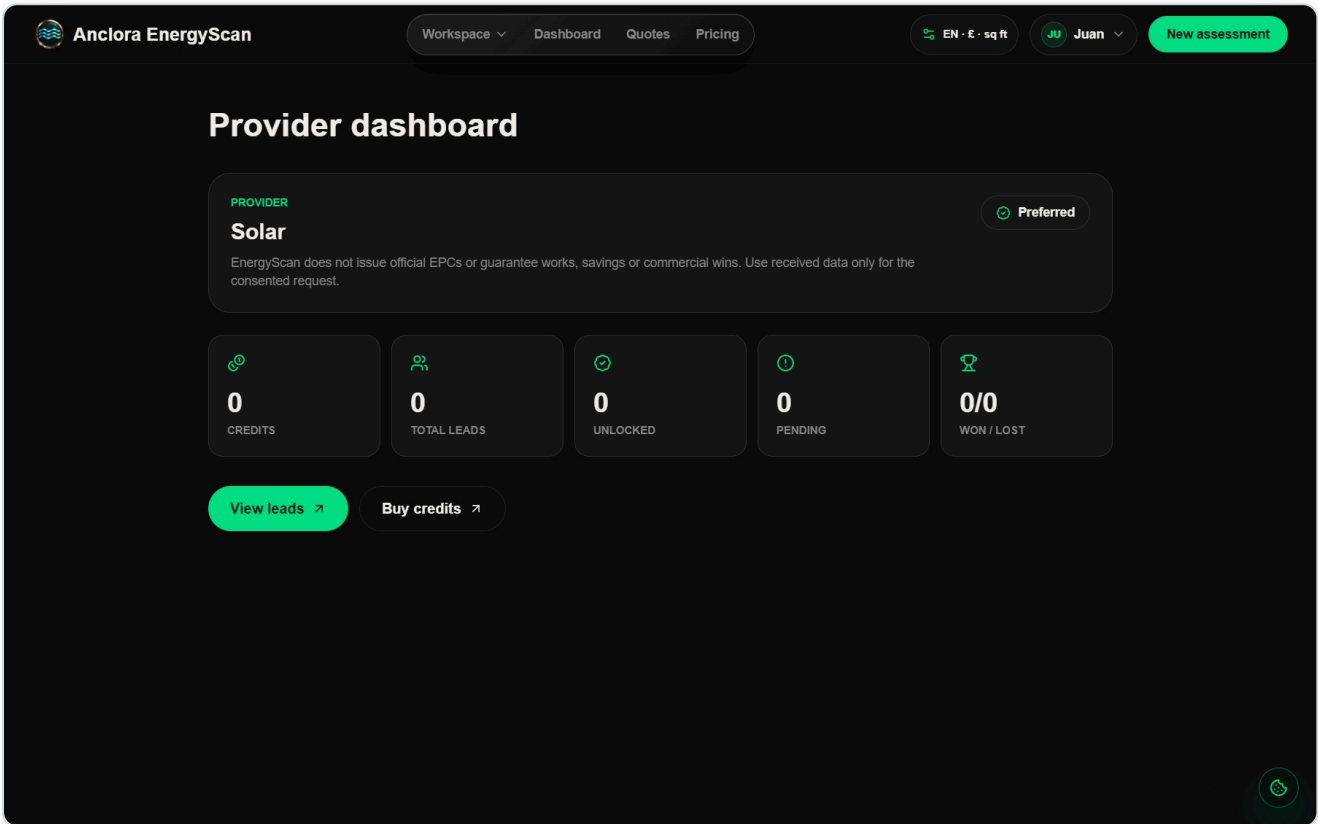

Field	Advice
Categories	Use clear codes: HVAC, SOLAR, WINDOWS, INSULATION, CEE
Service areas	Indicate real commercial areas: Palma, Mallorca, Balearic Islands
Email	Use an operational email address for notifications

The provider may be in statuses such as **PENDING, VERIFIED, PREFERRED, SUSPENDED** or similar, subject to internal review.

After submitting the form, Anclora reviews the profile internally. When the status changes to **VERIFIED** — or a higher status — you will receive a notification at the email address provided.

To access your provider dashboard, create an account or sign in to EnergyScan using that same email address: the link is made automatically on first access.

9.3 Provider dashboard

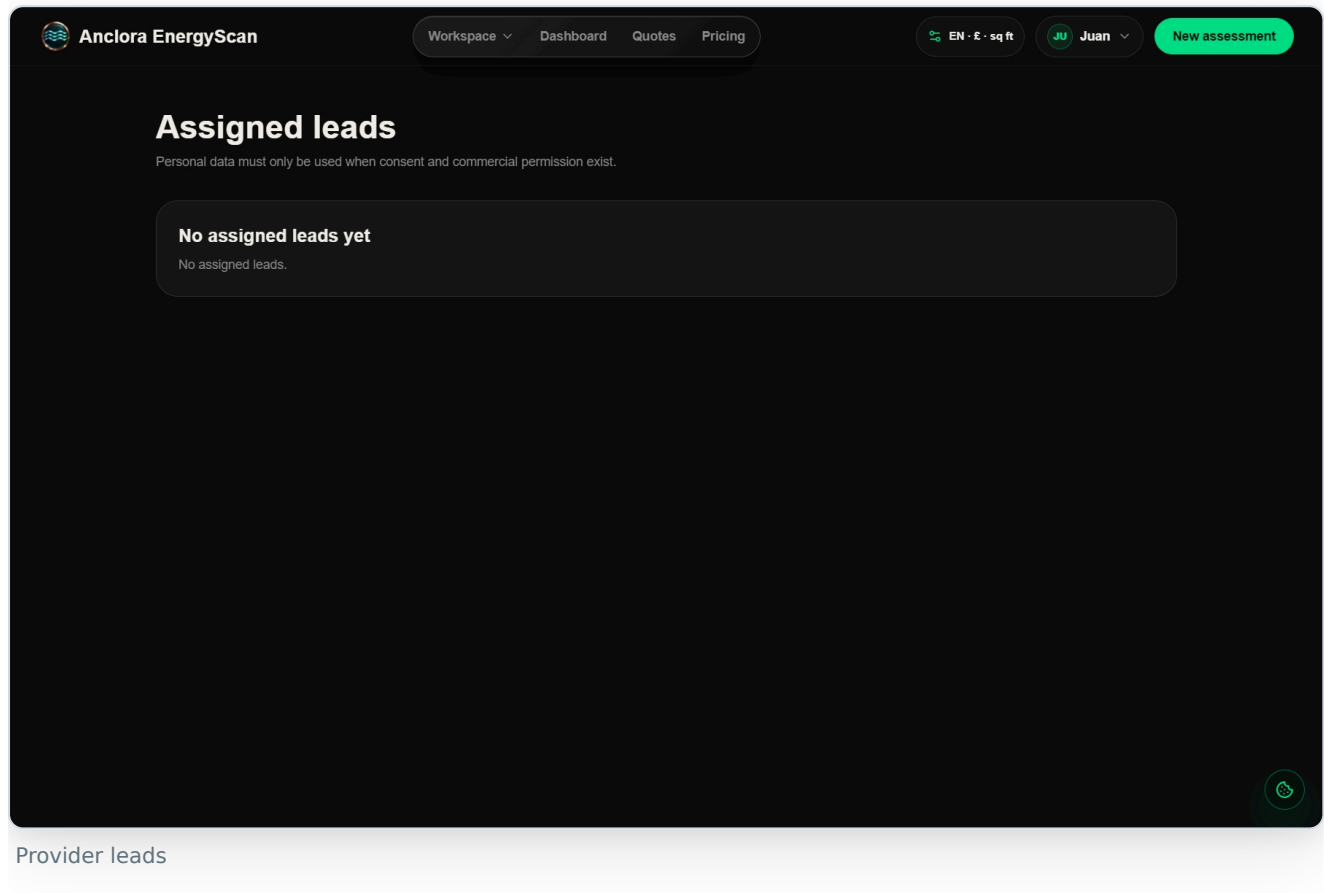

Provider dashboard

The provider dashboard shows:

Element	What it indicates
Provider name	Company linked to the account
Status	Review level or commercial tier
Credits	Balance for unlocking contacts
Total leads	Assigned requests
Unlocked	Contacts already accessible
Pending	Unmanaged leads
Won / Lost	Commercial tracking

If the provider is pending, the dashboard can be prepared, but commercial assignment may be limited.

9.4 Assigned leads

Each lead shows non-personal information:

- Service requested.
- Area.
- Urgency.
- Date.
- Commercial status.
- Property type if an assessment is linked.
- Postcode or area.
- Estimated class.
- Indicative budget if available.

9.5 Blocked contact and unlocking

For privacy reasons, personal data is blocked initially:

Before unlocking	After unlocking
Name not shown	Name shown if available
Email not shown	Email shown
Phone not shown	Phone shown
No credit consumed	Credit consumption recorded

To unlock:

1. Review the technical context of the lead.
2. Check that you have credits.
3. Click **Unlock contact**.
4. 1 credit is consumed.
5. The contact becomes visible.
6. Consumption is recorded in the ledger.

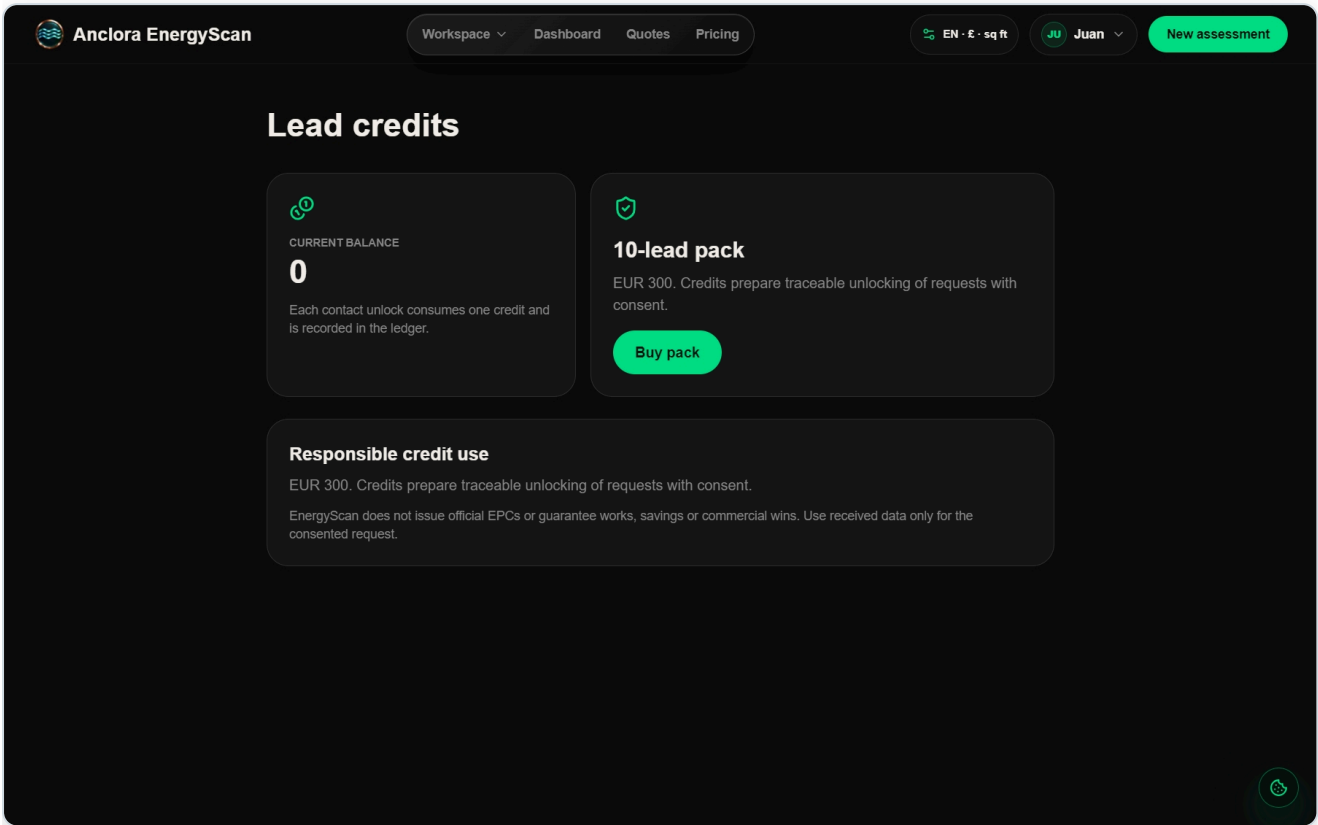

If you have already unlocked that lead, opening it again does not consume another credit.

9.6 Changing commercial status

On each lead you can update the status:

Status	Recommended use
Pending	New or unreviewed lead
Contacted	You have already contacted the user
Quote sent	You have sent a renovation quote
Won	Work is closed
Lost	Not closed
Cancelled	Request discarded

9.7 Credits and billing

Provider credits

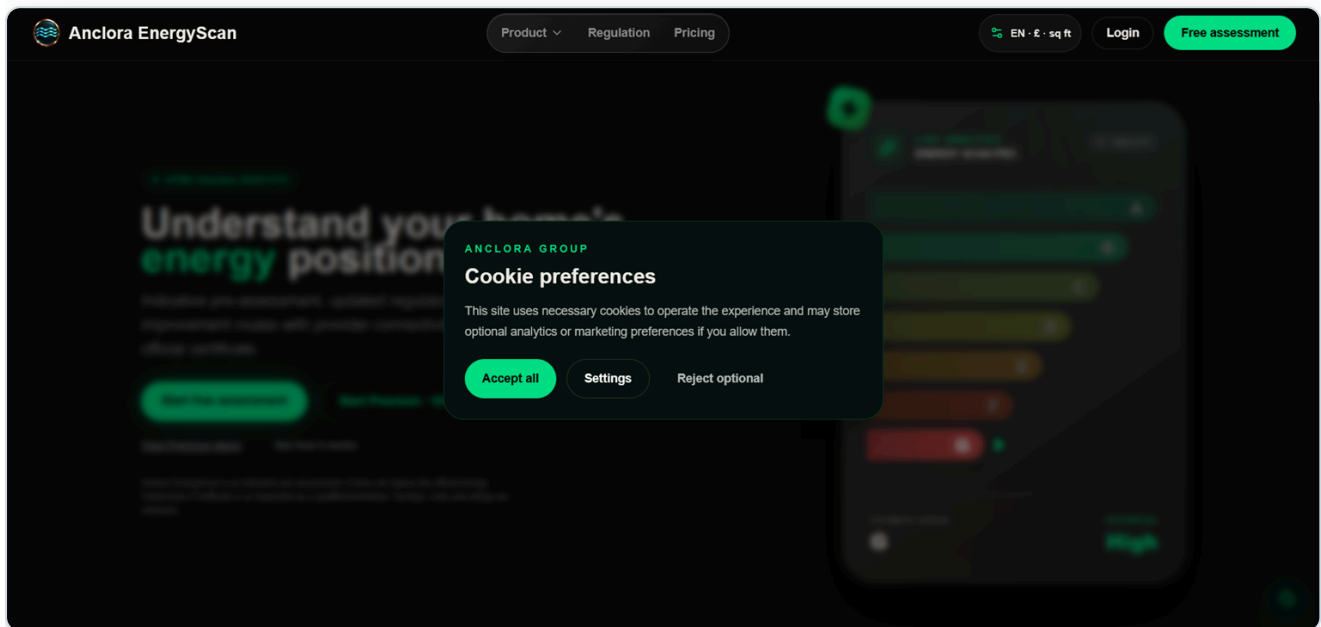

Credits are purchased in packs via Stripe.

Element	Description
Current balance	Available credits
Lead pack	Prepaid purchase to unlock contacts
Verifying payment	Temporary status until Stripe confirms
Ledger	Internal record of purchases and consumption

Personal data from leads may only be used for the consented request. EnergyScan does not guarantee commercial closures or works outcomes.

10. Cookies, privacy and personal data

10.1 Cookie banner

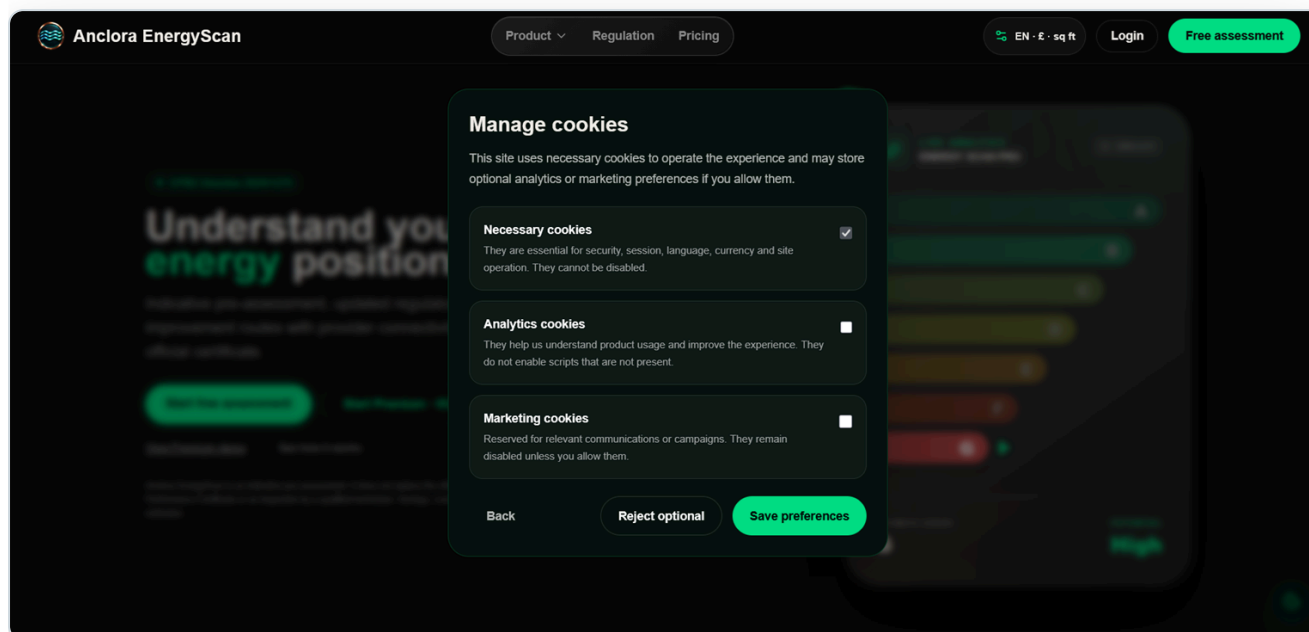

Cookie panel

The first visit shows a panel with three options:

Option	What it does
Accept all	Activates necessary, analytics and marketing cookies
Settings	Allows selection by category
Reject optional	Keeps only necessary cookies

10.2 Detailed settings

Cookie settings

Category	Purpose	Required
Necessary	Session, login and basic functionality	Yes
Analytics	Aggregate measurement to improve the product	No
Marketing	Personalisation or campaigns	No

You can change your preferences from the cookie icon in the bottom-right corner.

10.3 Lead privacy

EnergyScan applies a simple rule:

no provider should see a lead's name, email or phone number until the contact has been unlocked and consent exists.

Providers may only use that data for the purpose requested by the user.

11. Frequently asked questions

Does EnergyScan issue official certificates?

No. EnergyScan only generates indicative pre-assessments. The official EPC must be issued by a qualified technician.

Is the free result sufficient to sell or rent a property?

No. To sell or rent you need an official EPC when applicable regulations require it.

What is the difference between the free result and Premium?

The free result shows a basic estimate and allows downloading a 2-page basic PDF. Premium adds a full PDF, scenarios, costs, extended context, grants, cadastral images and AI visual analysis of photographs if you have submitted them.

Does the free PDF replace the Premium report?

No. The free PDF summarises the indicative class, confidence level and main findings. It does not include full scenarios, costs, grants, AI visual analysis or a document annex.

What does AI visual analysis do?

It reviews up to 3 submitted photographs in an indicative way within Premium. It can point out signs relating to the façade, windows, roof, heating, insulation or interiors, but it does not replace a technician's inspection.

Why does a notice appear about my target class?

If you select a target class, EnergyScan may indicate whether it appears achievable, whether it requires more budget than declared, or whether it does not appear technically achievable under current rules. It is an estimate, not a quote.

Is Budget Review included in Premium?

No. It is an independent product for analysing renovation quotes.

Can I retrieve my assessments?

Yes, if you made them while signed in. They are in the dashboard.

Can I change the language or theme?

Yes. Use the preferences selector in the top bar.

What happens if a payment shows as pending?

Wait a few seconds and reload. Stripe confirms payment via webhook.

Can a provider automatically see my phone number?

No. Only when a consented request exists and the provider unlocks the contact.

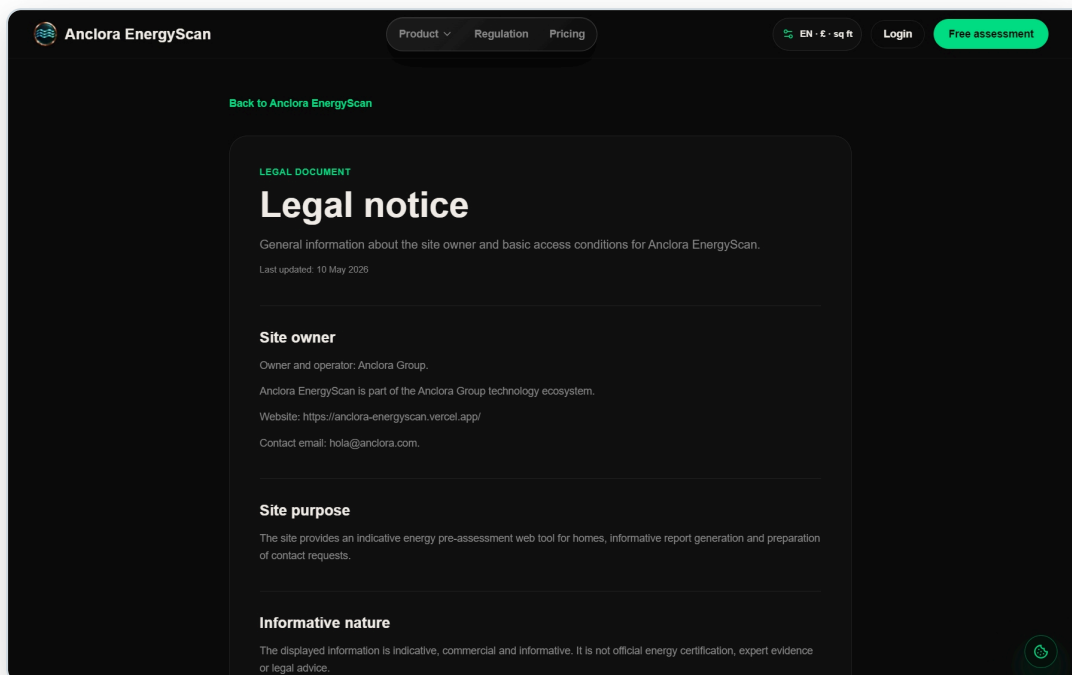

Are providers guaranteed by EnergyScan?

No. A verified or preferred status may indicate internal review, but does not guarantee works, pricing, savings or any outcome.

12. Quick glossary

Term	Meaning
Assessment	Analysis or pre-assessment of a property
Budget Review	Second opinion on a renovation quote
Free PDF	Downloadable 2-page basic summary at no cost
Premium	Paid report with full PDF and extended content
AI visual analysis	Indicative observations on submitted photographs, available in Premium
Lead	Contact request assigned to a provider
Credit	Unit that allows unlocking one contact
Ledger	Traceable record of credit purchase or consumption
Beta professional	Early access for technicians and companies
EPC	Energy Performance Certificate — official document
Professional profile	B2B use for managing client files or reports
Provider profile	B2B use for receiving consented leads and managing them commercially

13. Legal notice

Legal notice

Anclora EnergyScan provides indicative estimates based on declared data, submitted documents and internal models.

Legal documents

Document	Where to find it
Legal notice	Website footer
Terms of service	Website footer
Privacy policy	Website footer
Cookie preferences	Cookie icon

Important limitations

- It does not replace the official Energy Performance Certificate.
- It has no administrative validity.
- It does not guarantee savings, costs, grants or improvements in energy class.
- AI visual analysis uses measured language and depends on the quality of the images.
- Renovation quotes must be reviewed by qualified technicians or contractors.
- Public grants must always be verified against current official sources.
- Personal data from leads must be handled in accordance with GDPR and the applicable consent.
